

**CERTIFICATE PROGRAM**

# Machine Learning Specialization

170+ Hours of Training | 18+ Projects | Online Course

# CloudxLab & Course

---

At Cloudxlab, we are building one of the best gamified learning environments to make technology learning fun and for life. More than 50,000 users across the world have been benefited by our signature courses on Machine Learning and Big Data. Our vision is to upskill people on high-end technologies like Deep Learning, Machine Learning, Big Data and make them employable.

Every domain of computing such as data analysis, software engineering, and artificial intelligence is going to be impacted by Machine Learning. Therefore, every engineer, researcher, manager or scientist would be expected to know Machine Learning.

So naturally, you are excited about Machine learning and would love to dive into it. This specialization is designed for those who want to gain hands-on experience in solving real-life problems using machine learning and deep learning. After finishing this specialization, you will find creative ways to apply your learning to your work like building a robot which can recognize faces or change the path after discovering obstacles on the path.

**Sandeep Giri**

Founder at CloudxLab

# Why CloudxLab

---

**Earn a Verified Certificate from CloudxLab**

**Learn Machine Learning from industry experts and become expert in Machine Learning domain**

**Online cloud lab for hands-on for real-world experience**

**Best-in-class support Throughout your learning journey**

**Lifetime course access**

**Work on real-world projects.**

**Interact with the international community of peers via the discussion forum.**

# Course Creators

---

## **Sandeep Giri**

Founder at CloudxLab

Past: Amazon, InMobi, D.E.Shaw

**Course Developer**

[Know More](#)

## **Abhinav Singh**

Co-Founder at CloudxLab

Past: Byjus

**Course Developer**

[Know More](#)

## **Jatin Shah**

Ex-LinkedIn, Yahoo,

Yale CS Ph.D. IIT-B

**Course Advisor**

[Know More](#)

## **Praveen Pavithran**

Co-Founder at Yatis

Past: YourCabs, Cypress Semiconductor

**Course Advisor**

[Know More](#)

# Course Curriculum

---

## Course 1: Python For Machine Learning

- Introduction to Linux
- Introduction to Python
- Hands-on using Jupyter on CloudxLab
- Overview of Linear Algebra
- Introduction to NumPy & Pandas

# Course Curriculum

---

## Course 2: Machine Learning

### 1. Introduction to Statistic

Statistical Inference, Types of Variables, Probability Distribution, Normality, Measures of Central Tendencies, Normal Distribution

### 2. Machine Learning Applications & Landscape

Introduction to Machine Learning, Machine Learning Application, Introduction to AI, Different types of Machine Learning - Supervised, Unsupervised, Reinforcement

### 3. Building end-to-end Machine Learning Project

Machine Learning Projects Checklist, Frame the problem and look at the big picture, Get the data, Explore the data to gain insights, Prepare the data for Machine Learning algorithms, Explore many different models and short-list the best ones, Fine-tune model, Present the solution, Launch, monitor, and maintain the system

### 4. Classifications

Training a Binary classification, Performance Measures, Confusion Matrix, Precision and Recall, Precision/Recall Tradeoff, The ROC Curve, Multiclass Classification, Multilabel Classification, Multioutput Classification

### 5. Training Models

Linear Regression, Gradient Descent, Polynomial Regression, Learning Curves, Regularized Linear Models, Logistic Regression

### 6. Support Vector Machines

Linear SVM Classification, Nonlinear SVM Classification, SVM Regression

# Course Curriculum ---

## Course 2: Machine Learning

### 7. Decision Trees

Training and Visualizing a Decision Tree, Making Predictions, Estimating Class Probabilities, The CART Training Algorithm, Gini Impurity or Entropy, Regularization Hyperparameters, Regression, Instability

### 8. Ensemble Learning and Random Forests

Voting Classifiers, Bagging and Pasting, Random Patches and Random Subspaces, Random Forests, Boosting, Stacking

### 9. Dimensionality Reduction

The Curse of Dimensionality, Main Approaches for Dimensionality Reduction, PCA, Kernel PCA, LLE, Other Dimensionality Reduction Techniques

# Course Curriculum

---

## Course 3: Deep Learning

### 1. Introduction to Artificial Neural Networks

From Biological to Artificial Neurons, Implementing MLPs using Keras with TensorFlow Backend, Fine-Tuning Neural Network Hyperparameters

### 2. Training Deep Neural Networks

The Vanishing / Exploding Gradients Problems, Reusing Pretrained Layers, using Faster Optimizers, Avoiding Overfitting Through Regularization, Practical Guidelines to Train Deep Neural Networks

### 3. Custom Models and Training with Tensorflow

A Quick Tour of TensorFlow, Using TensorFlow like Numpy, Customizing Models and Training Algorithms, Tensorflow Functions and Graphs

### 4. Loading and Preprocessing Data with TensorFlow

Introduction to the Data API, TFRecord Format, Preprocessing the Input Features, TF Transform, The TensorFlow Datasets (TDFS) Projects

### 5. Convolutional Neural Networks

The Architecture of the Visual Cortex, Convolutional Layer, Pooling Layer, CNN Architectures, Classification with Keras, Transfer Learning with Keras, Object Detection, YOLO

### 6. Recurrent Neural Networks

Recurrent Neurons and Layers, Basic RNNs in TensorFlow, Training RNNs, Deep RNNs, Forecasting a Time Series, LSTM Cell, GRU Cell

# Course Curriculum

---

## Course 3: Deep Learning

### 7. Natural Language Processing

Introduction to Natural Language Processing, Creating a Quiz Using TextBlob, Finding Related Posts with scikit-learn, Generating Shakespearean Text Using Character RNN, Sentiment Analysis, Encoder-Decoder Network for Neural Machine Translation, Attention Mechanisms, Recent Innovations in Language Models

### 8. Autoencoders and GANs

Efficient Data Representations, Performing PCA with an Under Complete Linear Autoencoder, Stacked Autoencoders, Unsupervised Pre Training Using Stacked Autoencoders, Denoising Autoencoders, Sparse Autoencoders, Variational Autoencoders, Generative Adversarial Networks

### 9. Reinforcement Learning

Learning to Optimize Rewards, Policy Search, Introduction to OpenAI Gym, Neural Network Policies, Evaluating Actions: The Credit Assignment Problem, Policy Gradients, Markov Decision Processes, Temporal Difference Learning and Q-Learning, Deep Q-Learning Variants, The TF-Agents Library

# Projects

---

- **Analyze Emails**

Churn the mail activity from various individuals in an open source project development team.

- **Predict bikes rental demand**

Build a model to predict the bikes demand given the past data.

- **Noise removal from the images**

Build a model that takes a noisy image as an input and outputs the clean image.

- **Predict which passengers survived in the Titanic shipwreck**

The sinking of the RMS Titanic is one of the most infamous shipwrecks in history. In this project, you build a model to predict which passengers survived the tragedy.

- **Build a spam classifier**

Build a model to classify emails as spam or ham using NLTK, and scikit-learn.

- **Build an Image Classifier in Fashion MNIST dataset**

Classify images from the Fashion MNIST dataset using scikit-learn, and Python.

- **Deploy Machine Learning models to Production using Flask**

Learn how to deploy a machine learning model as a web application using the Flask framework.

# Projects

---

- **Build an Image Classifier in Fashion MNIST dataset**

Classify images from the Fashion MNIST dataset using Tensorflow 2, Matplotlib, and Python.

- **Training from Scratch vs Transfer Learning**

Learn how to train a neural network from scratch to classify data using TensorFlow 2, and how to use the weights of an already trained model to achieve classification to another set of data.

- **Working with Custom Loss Function**

Create a custom loss function in Keras with TensorFlow 2 backend.

- **Image Classification with Pre-trained Keras models**

Learn how to access the pre-trained models(here we get pre-trained ResNet model) from Keras of TensorFlow 2 to classify images.

- **Build cats classifier using transfer learning**

In this project, you will build a basic neural network to classify if a given image is of cat or not using transfer learning technique with Python and Keras.

- **Mask R-CNN with OpenCV for Object Detection**

Learn how to read a pre-trained TensorFlow model for object detection using OpenCV.

- **Art Generation Project**

Use TensorFlow 2 to generate an image that is an artistic blend of a content image and style image using Neural Style Transfer.

# Projects

---

- **NYSE Stock Closing Price Prediction using TensorFlow 2 & Keras**  
Predict stock market closing prices for a firm using GRU, a state-of-art deep learning algorithm for sequential data, with Keras and Python.
- **Sentiment Analysis using IMDB dataset**  
Create a sentiment analysis model with the IMDB dataset using TensorFlow 2.
- **Autoencoders for Fashion MNIST**  
Learn how to practically implement the autoencoder, stacking an encoder and decoder using TensorFlow 2, and depict reconstructed output images by the autoencoder model using the Fashion MNIST dataset.
- **Deploy Image Classification Pre-trained Keras model using Flask**  
Learn how to deploy a deep learning model as a web application using the Flask framework.
